

Rheumatoid Foot & Ankle

How to keep patients moving

Thursday, September 30
7p.m. – 8 p.m.
Red & Black Oak Rooms

Do you experience loss of mobility?

Do you suffer from foot and ankle pain?

Rheumatoid arthritis (RA) is an autoimmune disease that causes chronic inflammation in the joints and in the tissue around the joints. Diagnosing RA in the foot and ankle often includes a multi-physician approach.

Simple tasks of daily living can become difficult during flares in the ankle and small joints of the feet.

Bring your questions and join us for this educational talk as Dr. Robyn Vargo, fellowship trained in Foot & Ankle reconstruction addresses the common sites that are often affected, and the latest treatment options including operative and non-operative therapies for rheumatoid foot and ankle problems.

Robyn Vargo, D.O.

Orthopaedic Surgeon
Hinsdale Orthopaedics
